DBMS Project Abstract

→ Topic : Movie Store Management

→ Abstract :

A database is a quick & reliable way of sorting & storing data on a computer or a network.

With the aid of modern databases many questions can be answered that could lead in the increase sales leading to a greater profit, questions such as:

- ↳ What are the top & least sold i.e in-demand genres & what are their total sales?
- ↳ How many distinct users have rented each movie?
- ↳ Average price of each genre
- ↳ Who & how many frequent customer are there?
- ↳ Which title is more popular in which country

→ Software Requirements :

- ↳ SQL (Oracle) — For creating Database
